## Soundness Theorem for $TD$

Proof system  $TD$  is sound for total correctness of quantum programs.

- ▶ For any quantum program  $S$  and quantum predicates  $P, Q \in \mathcal{P}(\mathcal{H}_{\text{all}})$ , we have:

$$\vdash_{TD} \{P\}S\{Q\} \text{ implies } \models_{\text{tot}} \{P\}S\{Q\}.$$

## Completeness Theorem

The proof system  $TD$  is complete for total correctness of quantum programs.

- ▶ For any quantum program  $S$  and quantum predicates  $P, Q \in \mathcal{P}(\mathcal{H}_{\text{all}})$ , we have:

$$\models_{\text{tot}} \{P\}S\{Q\} \text{ implies } \vdash_{TD} \{P\}S\{Q\}.$$

## Proof Outline

- ▶ Claim:  $\vdash_{PD} \{wlp.S.Q\}S\{Q\}$  for any quantum program  $S$  and quantum predicate  $P \in \mathcal{P}(\mathcal{H}_{\text{all}})$ .

Induction on the structure of  $S$ .

$$wp.\mathbf{while}.Q = M_0^\dagger Q M_0 + M_1^\dagger (wp.S.(wp.\mathbf{while}.Q)) M_1.$$

Our aim is to derive:

$$\{M_0^\dagger Q M_0 + M_1^\dagger (wp.S.(wp.\mathbf{while}.Q)) M_1\} \mathbf{while}\{Q\}.$$

## Proof Outline

- ▶ Claim:  $\vdash_{PD} \{wp.S.Q\}S\{Q\}$  for any quantum program  $S$  and quantum predicate  $P \in \mathcal{P}(\mathcal{H}_{\text{all}})$ .

Induction on the structure of  $S$ .

- ▶ Example case:  $S = \mathbf{while} M[\bar{q}] = 1 \mathbf{do} S'$ .

$$wp.\mathbf{while}.Q = M_0^\dagger Q M_0 + M_1^\dagger (wp.S.(wp.\mathbf{while}.Q)) M_1.$$

Our aim is to derive:

$$\{M_0^\dagger Q M_0 + M_1^\dagger (wp.S.(wp.\mathbf{while}.Q)) M_1\} \mathbf{while} \{Q\}.$$

## Proof Outline, Continued

- ▶ Induction hypothesis on  $S'$ :

$$\{wp.S'.(wp.\mathbf{while}.Q)\}S\{wp.\mathbf{while}.Q\}.$$

## Proof Outline, Continued

- ▶ Induction hypothesis on  $S'$ :

$$\{wp.S'.(wp.\mathbf{while}.Q)\}S\{wp.\mathbf{while}.Q\}.$$

- ▶ Rule Loop Total: It suffices to show that for any  $\epsilon > 0$ , there exists a  $(M_1^\dagger(wp.S'.(wp.S.Q))M_1, \epsilon)$ -bound function of quantum loop **while**.

## Proof Outline, Continued

- ▶ Induction hypothesis on  $S'$ :

$$\{wp.S'.(wp.\mathbf{while}.Q)\}S\{wp.\mathbf{while}.Q\}.$$

- ▶ Rule Loop Total: It suffices to show that for any  $\epsilon > 0$ , there exists a  $(M_1^\dagger(wp.S'.(wp.S.Q))M_1, \epsilon)$ -bound function of quantum loop **while**.
- ▶ Bound Function Lemma: We only need to prove:

$$\lim_{n \rightarrow \infty} \text{tr}(M_1^\dagger(wp.S'.(wp.\mathbf{while}.Q))M_1(\llbracket S' \rrbracket \circ \mathcal{E}_1)^n(\rho)) = 0.$$

## Proof Outline, Continued

We observe:

$$\begin{aligned} & tr(M_1^\dagger(wp.S'.(wp.\mathbf{while}.Q))M_1(\llbracket S' \rrbracket \circ \mathcal{E}_1)^n(\rho)) \\ &= tr(wp.S'.(wp.\mathbf{while}.Q)M_1(\llbracket S' \rrbracket \circ \mathcal{E}_1)^n(\rho)M_1^\dagger) \\ &= tr(wp.\mathbf{while}.Q\llbracket S' \rrbracket(M_1(\llbracket S' \rrbracket \circ \mathcal{E}_1)^n(\rho)M_1^\dagger)) \\ &= tr(wp.\mathbf{while}.Q(\llbracket S' \rrbracket \circ \mathcal{E}_1)^{n+1}(\rho)) \\ &= tr(Q\llbracket \mathbf{while} \rrbracket(\llbracket S' \rrbracket \circ \mathcal{E}_1)^{n+1}(\rho)) \\ &= \sum_{k=n+1}^{\infty} tr(Q[\mathcal{E}_0 \circ (\llbracket S' \rrbracket \circ \mathcal{E}_1)^k](\rho)). \end{aligned}$$

## Proof Outline, Continued

We consider the infinite series of nonnegative real numbers:

$$\sum_{n=0}^{\infty} \text{tr}(Q[\mathcal{E}_0 \circ (\llbracket S' \rrbracket \circ \mathcal{E}_1)^k](\rho)) = \text{tr}(Q \sum_{n=0}^{\infty} [\mathcal{E}_0 \circ (\llbracket S' \rrbracket \circ \mathcal{E}_1)^k](\rho)).$$

Since  $Q \sqsubseteq I_{\mathcal{H}_{all}}$ , it follows that

$$\begin{aligned} \text{tr}(Q \sum_{n=0}^{\infty} [\mathcal{E}_0 \circ (\llbracket S' \rrbracket \circ \mathcal{E}_1)^k](\rho)) &= \text{tr}(Q \llbracket \mathbf{while} \rrbracket(\rho)) \\ &\leq \text{tr}(\llbracket \mathbf{while} \rrbracket(\rho)) \leq \text{tr}(\rho) \leq 1. \end{aligned}$$
